Subject: FW: Summary of Chris Grupe Unauthorized Access and Changes, and attachments

Importance: High

Micki,

Please investigate this and open a case report. Sgt Frank Johnson is going to send you an email with additional info on this subject i.e. linked in FB etc. Sounds like Grupe is in the military (a major having to do w/ IT – let's talk later as you can reach out to his Military commander as an option for leverage?)

Ricardo Karel has the computer in Mpls. To get a better understanding reach out to Thomas Gurney.

Simply, you need to verify his authority/access was shut down prior to him being terminated. (I was told it was) Sounds like he used Cached files on his laptop to do his tampering which was not retrieved when he terminated. Dig in the Mn statutes to see if there is anything in applicable for charges. When you have a grasp of this case and because this occurred in Mpls (our network is in Mpls) see who Mpls Pd IT crimes person is and meet with them in person (not over phone) & go over your file to see if there is enough to charge Grupe.

If you need to adjust your hours to work on this during the day let me know and you will be approved for it...work this case as a priority please.

Thanks,

Bob

Bob,

Sending this email string too in case it includes something the other doesn't.

Todd

Subject: FW: Summary of Chris Grupe Unauthorized Access and Changes, and attachments

Sir I came looking for you again today but not much luck. I would like to chat tomorrow if you have some time.

On Dec 15th we let go of an employee for poor performance but when we let him go he was remote. (I have some clean up work on how this was handled). The manager handling the employee did not take his laptop nor his aruba equipment (network connection gear) that folks remotely use to connect to the office. So while we terminated his employment we did not take away his equipment until Dec 17th when one of the leaders in IS met with him to gather the equipment. However between the time he was terminated and the time we retrieved the equipment the individual hacked into the network connection gear and proceeded to connect into CP's network. This was all completed on the morning of the 17th.

The former employee, Chris Grupe, proceeded to make his way through our network and changed key passwords in our production environment such that no one employed at CP could access mission critical networking equipment. Attached are the logs which show us Chris did the work remotely with his existing equipment and used is own ID. I would like to chat with you as I believe this is a criminal activity that requires your teams support.

Please let me know if you have time tomorrow or if you would like me to reach out to someone else on your team to deal with this issue. Thanks Laird.

Subject: Summary of Chris Grupe Unauthorized Access and Changes, and attachments

Hello Mike,

Please find below Ernest's review of the log files and Crowdstrike data, identifying what it was that Chris Grupe was doing on December 17th on each of the network devices that he accessed. In some cases it was only to pull a copy of the configurations. In other cases he went much further, changing the password on the Nexus switch (which you knew about) and attempting to clear evidence of his activity. Copies of all of the log files that were pulled from the devices that Chris accessed are in the attached email. If anyone requires additional information on this, please let me or Ernest know.

Regards,
Tim

Winn | Sr. Director - Network Services | 7550 Ogden Dale Road SE Calgary AB T2C 4X9

Subject: Chris Grupe Unauthorized Access and Changes

Chris Grupe used his RAP, PC and cached credentials to login into the CP network under the acct GRU0040. He did so the day after he resigned his position at CP.
He access the following Network Core Switches. I have indicated in blue log records taken from the switches. In red are the comments describing the activity.
Comments in Green are taken from the logs of the Falcon event software monitoring activities on his PC
As indicated below

Timestamp	Source	PID	ComputerName		User Name	File Name	MD5
12/17/2015 2:01:02	Falcon Host	176	7SCZH12	10.0.0.105	LOCAL SYSTEM	wininit.exe	
12/17/2015 12:01:02	Falcon Host	1196	7SCZH12	10.0.0.105	LOCAL SYSTEM	winlogon.exe	
12/17/2015 12:01:07	Falcon Host						
12/17/2015 12:01:08	Falcon Host						
12/17/2015 12:01:15	Falcon Host	7128	7SCZH12	10.0.0.105	gru0040	taskeng.exe	65ea57712340c09b1b0c427b4848a
*12/17/2015 12:02:07	Falcon Host	7624	7SCZH12	10.0.0.105	gru0040	ipconfig.exe	cf45949cdbb39c953331cdcb9cec20
12/17/2015 12:02:48	Falcon Host	5772	7SCZH12	10.0.0.105	gru0040	kitty.exe	2deb785e7382402d8cc2c7f31d4ecb

(* Above is Grupe logging into CP after his resignation and using SSH to access the network gear *)

Dec 17 06:51:33 2015:type=stop:id=10.188.206.220@pts/1:user=admin:cmd=shell terminated gracefully

Summary Evaluation
Why take the configs?
Most likely to reference them at a later date if he needed too.

Why change the passwords?
Lock out the switches from administration, but allow them to function until a failure at a later date.

Why not do more?
He was likely using cached creditenials on his PC. When he connected to CP, his cached creds would be expired, but s
cess until his screen saver cut in. At this point he would be stuck and could not do more. He wiped out his disk pa
assets.

Take Care,
Ernest
